Working group 2

Development of Sustainable Land Administration

I had a dream:

Is there a need for a humanitarian arm of FIG – a Surveyors Without Frontiers?

Working group 2

Development of Sustainable Land Administration

- The idea of working on the Surveyors without Frontiers was to some extent supported by the FIG
 - Post disaster management discussed in FIG
 - Letter from Paul van Molen to investigate a number of issues
- I did not have the time to invest in the project during the last two years
- Delighted to listen to three persons today making references to the topic

Land is a vulnerable resource

Land is the source of all life on earth. However, land is also a vulnerable resource that needs to be managed properly.

The Working groups of FIG's Commission 7 focus on this management by looking into the development of advanced cadastre and land administration, the development of innovative, advanced technology in land administration, and the creation of secure land tenure.

Since we need all the help we can in our work, we encourage all to join one or more of the working groups and offer their help. Contact us [here](#). Everyone is welcome!

Working group 2

Development of Sustainable Land Administration

No plans for the coming half year

- Last year in Verona attempts were made to work together with WG1
- It was decided that WG2 should come up with a proposal
- One letter sent – but no progress – we live in a busy world
- Future – I am sure there is a need for a humanitarian arm of surveyors – the role of FIG is unclear for me
- Suggestion: The role of WG should be redefined – one man's show does not last
