

CADASTRAL TEMPLATE 2.0 – REPORT 2018

Dr. Daniel Steudler, Scientific Associate, swisstopo

FIG-Commission 7, Annual Meeting 2018
Bergen, 26 Sep. 2018

Schweizerische Eidgenossenschaft
Confédération suisse
Confederazione Svizzera
Confederaziun svizra

Table of Content

- Status (Daniel Steudler)
- Agreement with UN-GGIM (Gerda Schennach)
- Role of Cadastral Template over the next 4-year-term (Daniel Páez)

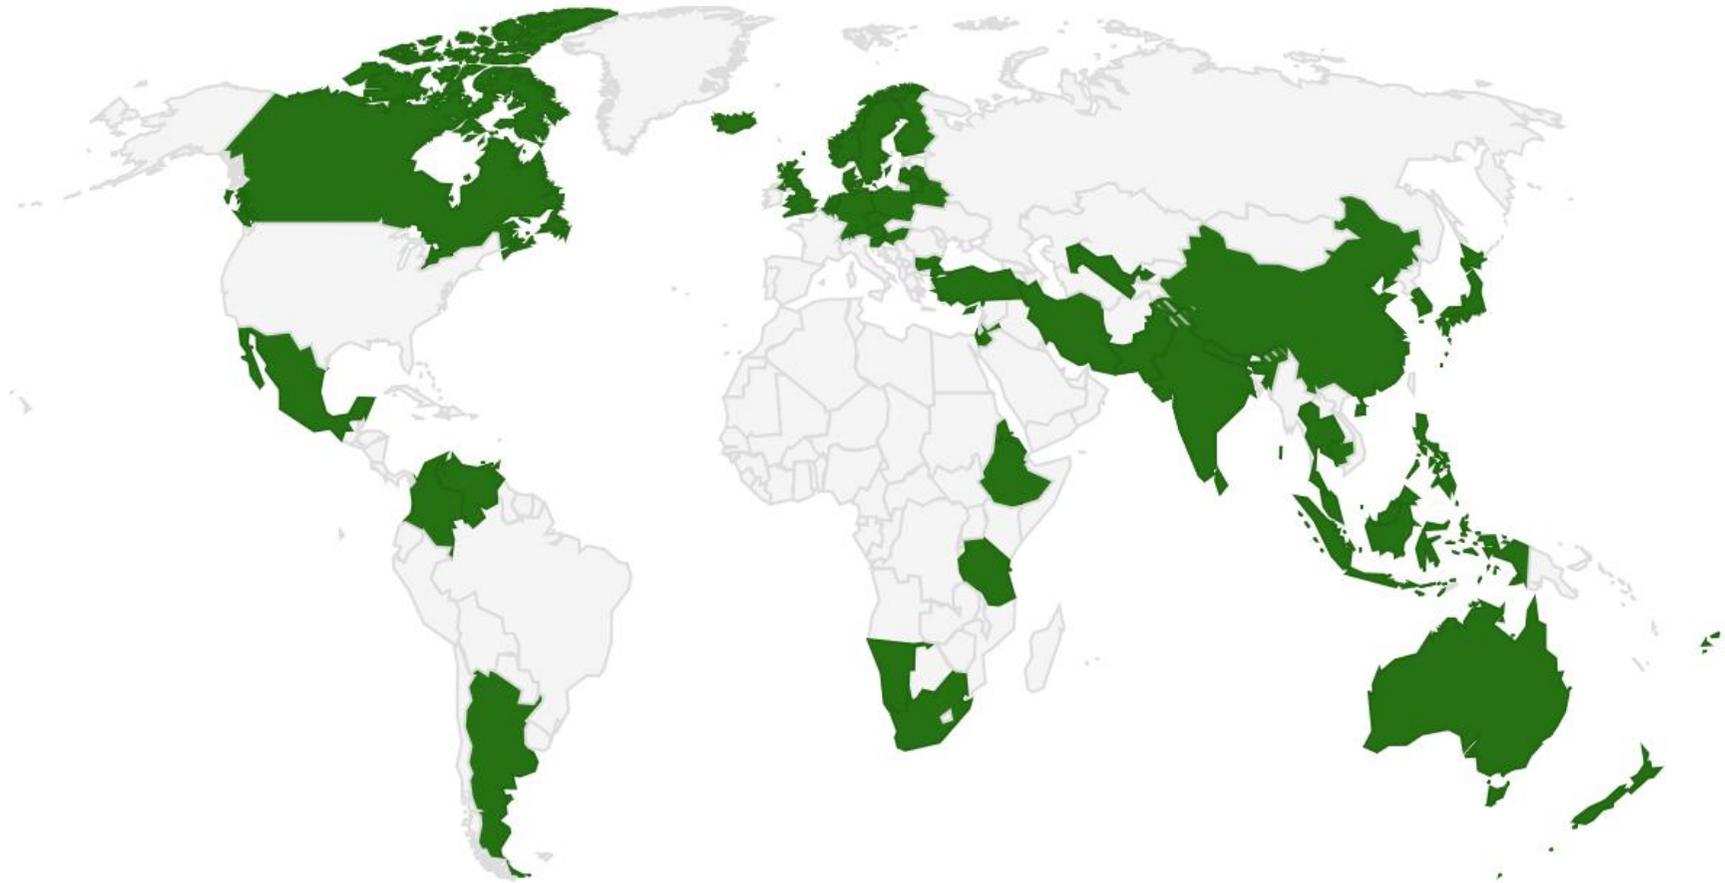

- Discussion

Origins and Characteristics

- developed by a research team from University of Melbourne in 2003 and maintained ever since
- support and data from PCGIAP and FIG-Commission 7 delegates
- regular updates mainly from FIG-Commission 7 delegates
- content:
 - Descriptive Country Report (country context, institutional framework, description of cadastral system, cadastral mapping, reform issues)
 - Basic Indicators
- new web design in 2012, with existing data structure
- on-going support, input, and updates from FIG-Commission 7

56 countries (Sep. 2018)

- web design, technology, and user interface need an upgrade
- in order to remain relevant, the CT needs to accommodate key indicators for SDGs

- install kind of a dash board illustrating status and progress

The Way Forward

- University of Melbourne is very happy to continue cooperation
- seek the cooperation with the UN-GGIM Academic Network
- planned extension in order to accommodate indicators for SDGs
- develop the CT into a platform for land administration facts
- FIG-Commission 7 will continue its support by providing annual updates through their delegates (the cadastral template data collection remains as a standing item in the work plan)

Suggested Schedule

- Ø Sep. 2018: annual update by FIG-Commission 7 delegates
- Ø Dec. 2018: input from UN-GGIM for additional SDG indicators
- Ø Apr. 2019: reshaped website goes online, including new indicators
- Ø May 2019: request to FIG-Commission 7 delegates for providing data

Agreement with UN-GGIM (Gerda Schennach)

Role of Cadastral Template over the next 4-year-term (Daniel Páez)

Role of Cadastral Template over the next 4-year-term (Daniel Páez)

1. More figures needed: how many countries, how many visits per months, etc. Do you have some of this data?
2. General strategies for the future of the Cadastral Template:
 - a. should cadastral template be more a tracking tool in where countries report how they are travelling in land issues to meet their SDGs?
 - b. Are we going to keep populating it using FIG delegates or use other bodies such as UNGGIM, draw information from other sources (such as the world bank doing a business evaluation of property registration), or a combination of all these methods?
3. Timeframe is ambitious and too optimistic
4. Commission 7 should produce a short document about SDGs and land to coincide with the new version of the Cadastral Template. Ideally, every year we will produce a short document that summarises SDGs progress in the land administration and management field.
