FIG WORKING WEEK 2015
17–21 MAY SOFIA BULGARIA

Rashid Al Alawi MSc Dissertation (May – September)

Aim

To establish a best practice guidelines document for GNSS positioning in Oman.

Objectives

1. Review the best practice guidelines of the (CORS) networks.
2. Critically review the current CORS network design for Oman
3. Determine the accuracy of extending a CORS network using the TRS method.
4. Assess PPP alternative GNSS solution for remote areas in Oman.

Oman: Surveying and Mapping Infrastructure

National Survey Authority (NSA)

1954 - Fahud Geodetic Datum established

1979 - Doppler satellite campaign 42 control stations in the Fahud Datum network occupied.

2014 - New geocentric datum based on the ITRF2008 frame solution adopted (ONGD14)

ONGD14 realised through occupation of 20 geodetic control points and connected to almost 50 IGS sites.

Transformation parameters between ITRF2008@2013 and ITRF89

CIGNET WGS84 Base Network

The Cooperative International GPS Tracking Network (CIGNET) WGS84 was established in 1994.

Comprised of 7 GPS primary stations established by NSA observed for 60 hours

Known as The Sultanate of Oman WGS84 stations.

NSA First Order Control Network

In 1993, the First Order GPS Network was established by NSA.

Comprised of 79 GPS control stations.

GPS observation conducted for every control point for 24 hours.

Connection was made to the 7 primary stations.

Second Order GPS Network

Comprised of 494 stations, established progressively by NSA until 2010 .

Stations were observed for 2-4 hours depending on the baseline length.

More than 90% of these stations are benchmarks.

First Order GPS Field Campaign

In 2013, 20 control point stations were selected,

The campaign covers 7 primary stations and 13 First Order GPS stations.

Each station was observed for one week while connected to almost 50 IGS sites.

The screenshot shows a software application window titled "Coordinate Transformation". At the top left is the logo of the "NATIONAL SURVEY AUTHORITY MINISTRY OF DEFENCE SULTANATE OF OMAN". At the top right is the logo of the "الهيئة الوطنية للمساحة وزارة الدفاع سلطنة عمان". The main title "برنامـج تحويل الأحداثيات" (Coordinate Transformation Program) is centered above a map of Oman. Below the map are four buttons: "Geographical to UTM", "UTM to Geographical", "Datum Transformation", and "UTM Military Grid". To the right of the map are two more buttons: "Geographical to UTM (Zone 39 and 40 Combined)" and "UTM (Zone 39 and 40 Combined) to Geographical". A "Datum Transformation (User-Defined)" button is located at the bottom right.

FIG WORKING WEEK 2015
17–21 MAY SOFIA BULGARIA

Conclusion

- Overall, variability in the results across the 15 sites between all three PPP services was recognized.
- Differences in the 3D position of 33% of the samples were approximately 50 mm in 1-hour and 2-hour results across all three services.
- Evident systematic bias in Easting values.
- Thus the PPP method can be used for medium-accuracy positioning purposes, such as map production to small and medium scales.
