## BLENDED LEARNING METHOD (I)

- 1 **Blended Learning**, in general, is a learning method that combines classical (**face-to-face**) methods with learning methods that use **online media** (**e-learning**). Blended learning practices will facilitate both 'same-time different-place' and 'different-time different-place' types of interactions (Aditya, 2020).
- 2 The implementation of **learning with the blended learning method** depend on five keys to success, namely live event, self-paced learning, collaboration, assessment and performance support materials Carman (2005).

## 5. CONCLUSION

To develop the competence and professionalism of licensed surveyors, it is necessary to have the Indonesian Cadastral National Work Competency Standards. This competency standard is the basis for competency-based human resource management and development system.

Training using the blended learning method is part of the digital transformation of Center for Human Resources Development (PPSDM) of the Ministry of ATR / BPN in the industrial era 4.0. The Blended Learning method combines classical (face-to-face) methods with learning methods that use online media (e-learning)

The Blended Learning method is one of the PPSDM's strategies to increase the competency of Licensed Surveyors' human resources to support national land strategic programs.
