

GPS EARTH OBSERVATION NETWORK (GEONET) OF JAPAN

Tetsuro IMAKIIRE and Yoshiro NAKAHORI, Japan

Key words: GEONET, Crustal deformation monitoring, GPS Data Service.

ABSTRACT

Geographical Survey Institute (GSI) established GPS permanent observation station network GEONET covering all over Japanese islands. GEONET is working for the monitoring for crustal deformation. Much information on geodynamics has been obtained from the analysis of GEONET data. GSI is going to extend its ability into the GPS data service for surveying and positioning.
